Wordmark Do Not

Do not use blue version of the full wordmark lockup

Do not create customized wordmark or different weight of the wordmark

Do not create customized sub-brand or partnership lockup with the logo

The logo and the icon's padding is equal to half the height of the icon (marked as x in the diagram).

Padding

The Primary Logo can be positioned in the top left/right, middle left/right, and bottom left or right. This applies to formats of all kinds including portrait, landscape, or square (in both print and digital). Create engaging compositions by using the logo in a position which creates natural hierarchy and asymmetrical negative space.

3 Color

The Base palette is anchored by a bright blue, white, and silver to create a bold and vibrant, yet trusted look and feel. Black is used primarily as a foundational background element or as an accent for text and graphics. The complimentary accent color palette offers a wider color spectrum with vivid qualities that help produce depth and a contemporary aesthetic throughout the identity system.

The gradient of colors can be leveraged to communicate collaboration with partners.

Special Instances

Coinbase Sans is the primary brand typeface. It is a versatile grotesk sans serif that is used for all Coinbase branded communications. No other typeface should ever be used in its place. Designed as a type family, it is packaged with four distinct typefaces Display, Sans, Text and Mono that have been optimized for specific range of point sizes.

Marketing Examples

 BASE OUR PAST, PRESENT, AND FUTURE IS ONCHAIN.

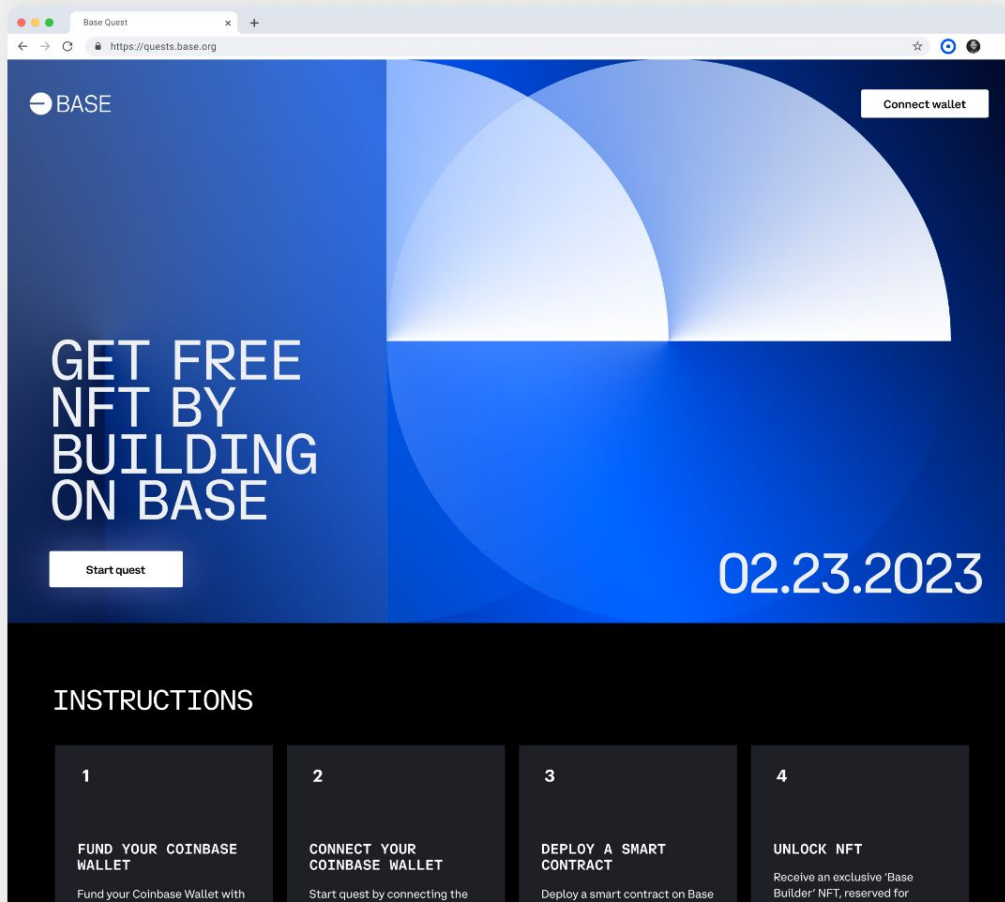

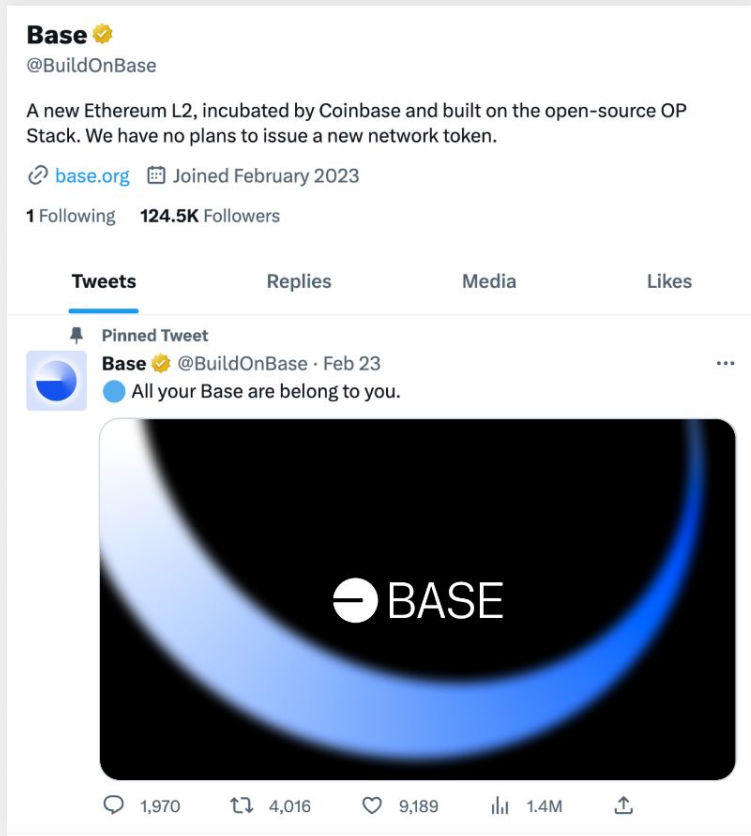

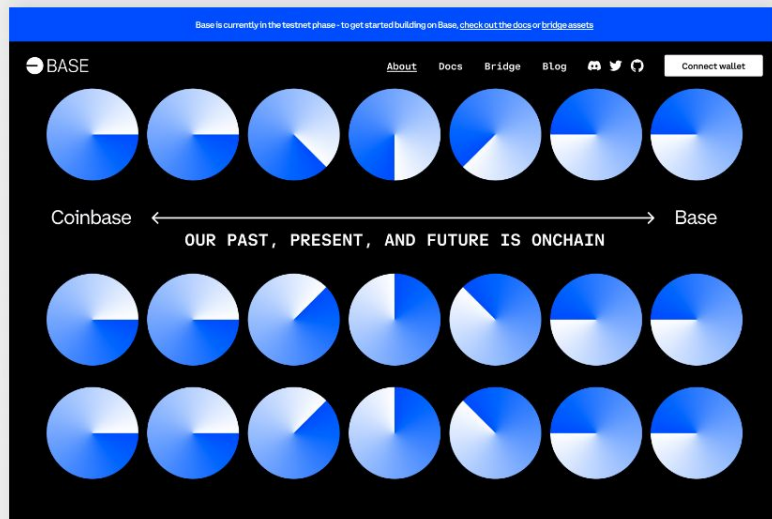

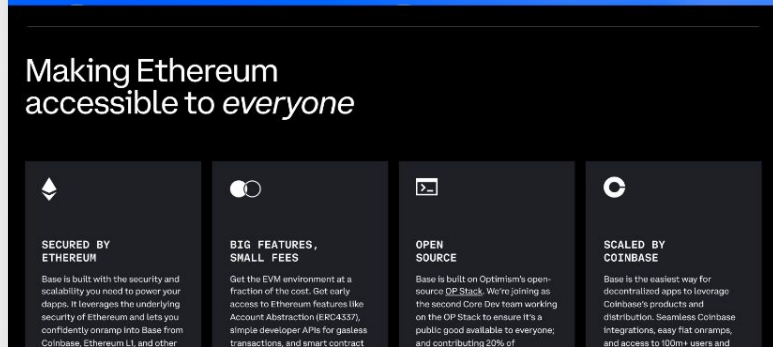

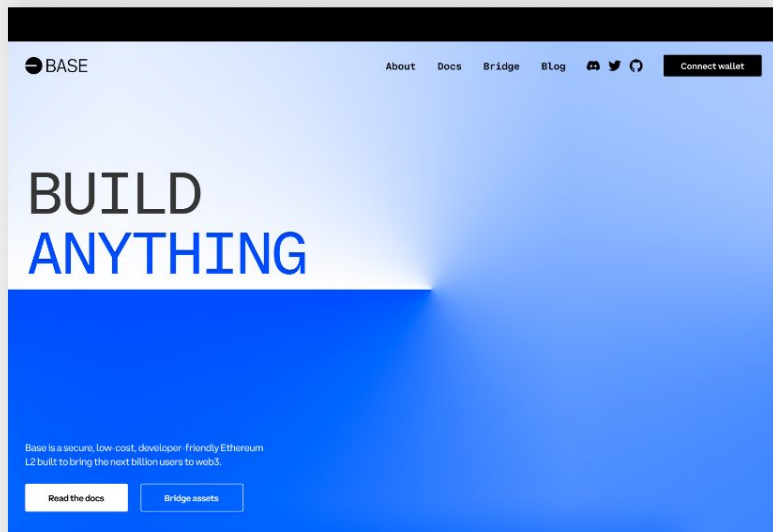

BUILD ON
BASE

ONCHAIN AT SCALE

We've been building towards Base for the last 10 years.

From the beginning, our secret master plan has been clear and consistent: create an open financial system that increases economic freedom globally by moving deliberately through four phases.

Phase 1: Develop the protocol (1M people)

New protocols (Bitcoin, Ethereum, etc) were invented and people began to tinker with them. Open source communities developed around each protocol and early adopters began experimenting with how they could be used.

Phase 2: Build a digital currency exchange (10M people)

Coinbase started here. Investment or speculation is a bootstrapping mechanism for a payment network (in other words, it is the single-player mode of digital currency). And the creation of safe and easy to use exchanges served as a bridge for people to get their local currency into and out of digital currency.

Phase 3: Build a mass market interface for digital currency apps (100M people)

To move beyond just exchange and investment, consumers and businesses needed an easy interface to start using digital currency and its applications. Over the last few years, countless applications have been built to let anyone, anywhere access the nascent cryptocurrency, including Coinbase, Coinbase Wallet, Metamask, Rainbow, Trust Wallet, and others.

Phase 4: Build the "dapps" of an open financial system (1B+ people)
